DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 4-277575 or JP 4-277576 or JP 4-277578 or JP 4-96915 or GB 1259910, they are of record on 1449.

JP 4-277575 or JP 4-277576 or JP 4-277578 discloses a title modifier comprises a thermoplastic aromatic polycyclic resin prepared by reacting 100 moles of an aromatic polycyclic compound such as acenaphthene or naphthalene---with 10-50 moles of a phenol such as phenol or 3-5C alkylphenol, and 50-200 moles of a formaldehyde compound.

JP 4-096915 discloses a coating resin composition comprising 100 pts.wt. polycyclic aromatic compound such as naphthalene or biphenyl, 5-50 pts. Wt. Phenols such as cresol and a p-formaldehyde.

GB 1259910 discloses in Examples 1 and 3, Table 1 and in the claims, the required reactants with the weight ratios.

The disclosures of the references differ from the instant claims in that they do not disclose the claimed formula (1) nor the use as a tackifier nor a vibration damping agent.

However, the references do disclose the required components under conditions to form the same or similar products having the properties such as improving the corrosion resistance of the material, and it is suitable for use as a heavy-duty anticorrosive coating material. Therefore, it would have been obvious to one of ordinary skill in the art to select the reactants under conditions to form the same or similar products of the claimed formula and for its use since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selections.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc Truong whose telephone number is 703-308-2437. The examiner can normally be reached on Monday-Friday.
